

# Generalized Pustular Psoriasis (GPP): a rare autoinflammatory skin disease

*GPP is a rare autoinflammatory skin disease with episodes of Flares.*

*GPP can affect the body in many different ways and not everyone will experience exactly the same symptoms.*

*There might be painful, pus-filled blisters (called pustules), along with red, dry, cracked or scaly skin, and severe itching.*

*GPP is not contagious and does not spread from person to person*

*GPP can lead to life threatening complications - heart failure, renal failure, sepsis, often requiring emergency care*
